

# THE EVOLUTION OF AIR

Taking into account a variety of specific needs and demands of American investors, we succeeded in creating an innovative product line by extending our way of thinking about perfect HVACR solutions.

ADVANCED AIR CONDITIONING & VENTILATION SOLUTIONS

## OUR PRODUCTS ARE DEVELOPED FOR:

Klimor's offer consists mostly of the extensive type line of modern modular air handling units designed for any kind of commercial and industrial applications as well as for various residential buildings.

### Creating a Sense of Air Comfort

For half a century Klimor has offered its customers and business partners innovative HVACR solutions based on energy saving and environment friendly priorities. This way the company has been meeting people's versatile needs for the air comfort, well-being as well as comfortable living.

### Supreme Performance

We transfer our clients' needs regarding a perfect product into a technical concept. Development of new product initiatives is the responsibility of our own R&D division - a team of engineers with many-years' experience and wide industry and product knowledge. In Europe, Klimor has proven to be able to create top-class solutions whose technical parameters and workmanship meet the highest global standards.

### Wide Range of Products

Klimor implements topmost solutions applied in the wide range of air conditioning and ventilation systems. The scope of Klimor's production includes, among others, air conditioning, heating and ventilation AHUs in their standard, hygienic, indoor swimming pool and maritime performance, AC AHU's with heat recovery and heating-cooling sets.

### EVolution Through Innovation

"EVO" range of modular air handling units is an evolution of technological thought and engineering excellence. We are proud to offer on the American market an innovative product that is able to change people's way of thinking about ultimate HVACR solutions. Our confidence comes from implementation of the strictest standards of the quality management, proven know-how and almost five decades of manufacturing experience.

## 1967-2017: Fifty Years of Innovation & Experience

Klimor AHUs are developed in our own production plant located in the heart of Europe – in Poland. Klimor's factory and the R&D division are situated in the northern part of the country, in Gdynia, directly by the Baltic Sea.

### 1967

ESTABLISHMENT OF THE COMPANY

Klimor is established in the period of intensive growth in the shipbuilding industry in Poland as a result of merging a few national shipbuilding companies into one organization. In those days Klimor operates as a specialized business unit supplying cooling and air conditioning products dedicated to the Polish shipbuilding and shipyard industry. The initial stage of Klimor's activity is based on assembly only.

### 1971

COMMENCEMENT OF PRODUCTION

Dynamic growth in the shipbuilding industry results in a decision to invest in the own production plant. In order to achieve that two manufacturing facilities are founded. Klimor, as the only company in Europe starts to deliver 'SPIRO' ducts which constitutes an absolute novelty. Klimor is also regarded one of the leading manufacturers of Cu-Al heat exchangers.

### 1974

FIRST AIR CONDITIONING UNIT

Klimor, as the first Polish company, develops a prototype of an air conditioning unit and then launches its regular production. The manufacturing operation of Klimor covers full range of air conditioning and ventilation units and systems designed for the maritime industry.

### 1979

LEADING SUPPLIER OF MARITIME INDUSTRY

The company manufactures comprehensive air conditioning and cooling systems for the shipbuilding industry in Poland. At the same time it is also the leading exporter to Central and Eastern Europe. Klimor becomes the undisputed number one in the HVACR industry with regard to both quantity and quality. The company successfully starts to export its units to many Western European Countries (EEC).

### 1982

KLIMOR GOES ASHORE

The beginning of the 1980's brings the first significant recession in the shipbuilding industry. As the production collapses Klimor extends its scope of business with offering some solutions dedicated to the onshore market.

### 1980'S-1990'S

HIGHLY-SPECIALIZED HVACR SOLUTIONS

production of highly-specialized air conditioning units dedicated for healthcare facilities and so called 'clean technologies' like laboratories and pharmaceutical facilities as well as of modular units for indoor swimming pools and HVACR systems designed for rooms with high humidity. At that time Klimor also has a significant share in other onshore markets incl. hotels, public buildings, industrial facilities and power plants.

### 2011

KLIMOR BECOMES A PART OF THE KLIMA-THERM GROUP

Since 2010 Klimor is part of KLIMA-THERM Group (KTG) – a leading HVACR supplier in Poland. Business of KTG is run in 5 European countries with over 300 employees and 22 branch offices. This way Klimor joins a group of companies with international range and takes advantage of the strength and potential of one of the most significant suppliers in the HVACR industry in central and north-eastern part of Europe.

### 2015

KLIMOR ENTERS THE US MARKET

As the "grown up" company Klimor opens to new clients and new sales markets. At the end of 2015 Klimor starts researching the opportunities in the United States of America and establishes the company Klimor USA Inc. Keeping in mind the needs and demands of investors in North America, the company develops a dedicated range of modular air handling units that later will be launched under the brand "Klimor EVO".

### 2017

KLIMOR STRIKES 50 AND RELAUNCHES

Klimor is celebrating the 50 years of its operation. The round, golden anniversary of the company's existence becomes a natural context and the reason to implement a new visual identification. The new logo combines the company's modernity and dynamics with tradition and experience of the last 5 decades. The relaunch also crowns a period of intensive changes made within the Klimor company under the umbrella of KLIMA-THERM Group.
